EM3028 RTC extends battery life of connected devices by 50%

The EM3028 Extreme low power Real-Time Clock (RTC), setting a new industry benchmark for accuracy and power consumption. The EM3028 leads the way for green IoT applications, with 50% extended battery life compared to its closest competitor, at double the accuracy. It can extend the device life span at a reduced overall BOM cost.

This RTC provides an elegant solution for increasing the autonomy of battery driven devices, by providing accurate sleep and wake-up timing for power-hungry elements in a certain application. The high accuracy and long-term stability of the EM3028 guarantee consistent performance throughout the device lifetime without the need to calibrate during manufacturing. Its 1-ppm accuracy guarantees a staggering 30 seconds precision over one year, twice as good as the best-in-class RTC previously on the market, while consuming lowest energy.

With only 40nA current consumption for 1-ppm accuracy, the EM3028 of EM Microelectronic Marin, occupies a top position in terms of low power consumption. The extreme low power consumption allows using low cost MLCC capacitors to cover the back-up time. Other key features of EM3028 include a 32-bit UNIX timer, operating voltage range as low as 1.2V, as well as a plug-and-play, factory pre-calibrated non-volatile configuration setting guaranteeing the configuration and user parameters are never lost, even in case of system power fail.

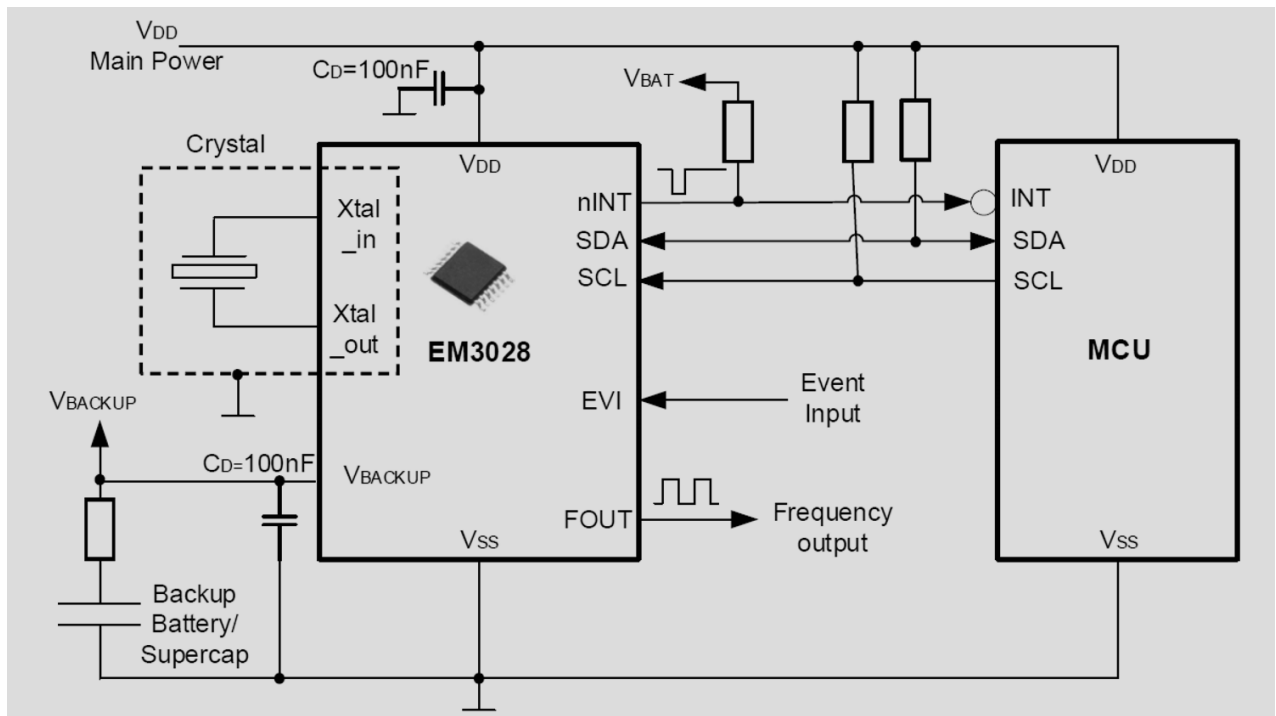

For safety against inadvertent overwriting of the time, a user programmable Password can protect registers and configuration registers.

Technical Feature

- Extreme low power consumption: **40 nA @ 3 V.**
- Wide operating voltage range: **1.2 V to 5.5 V.**
- Time accuracy: possible to calibrate to **±1 ppm @ 25°C**
- Non-volatile configuration settings with user programmable offset value.
- Configuration stored in EEPROM and mirrored in RAM (for personalization and for storage of critical parameters)
- Password protection to secure configuration parameters
- Backup Switch and Trickle Charger function.
- Provides year, month, date, weekday, hours, minutes and seconds.
- Automatic leap year correction; 2000 to 2099
- 32 bit UNIX time counter.
- Timer, alarm and external event functions with time stamp
- Clock output: 32.768 kHz, 8192 Hz, 1024 Hz, 64 Hz, 32 Hz, 1 Hz.
- 43 bytes non-volatile user memory, 2 bytes user RAM.
- I²C-bus interface: 400 kHz.
- Package: TSSOP14, 100% Pb-free, RoHS-compliant (On request also available in ultra-small SMD C7 package, factory calibrated and including the 32kHz fork crystal)

Typical application example:

Software Platform and support

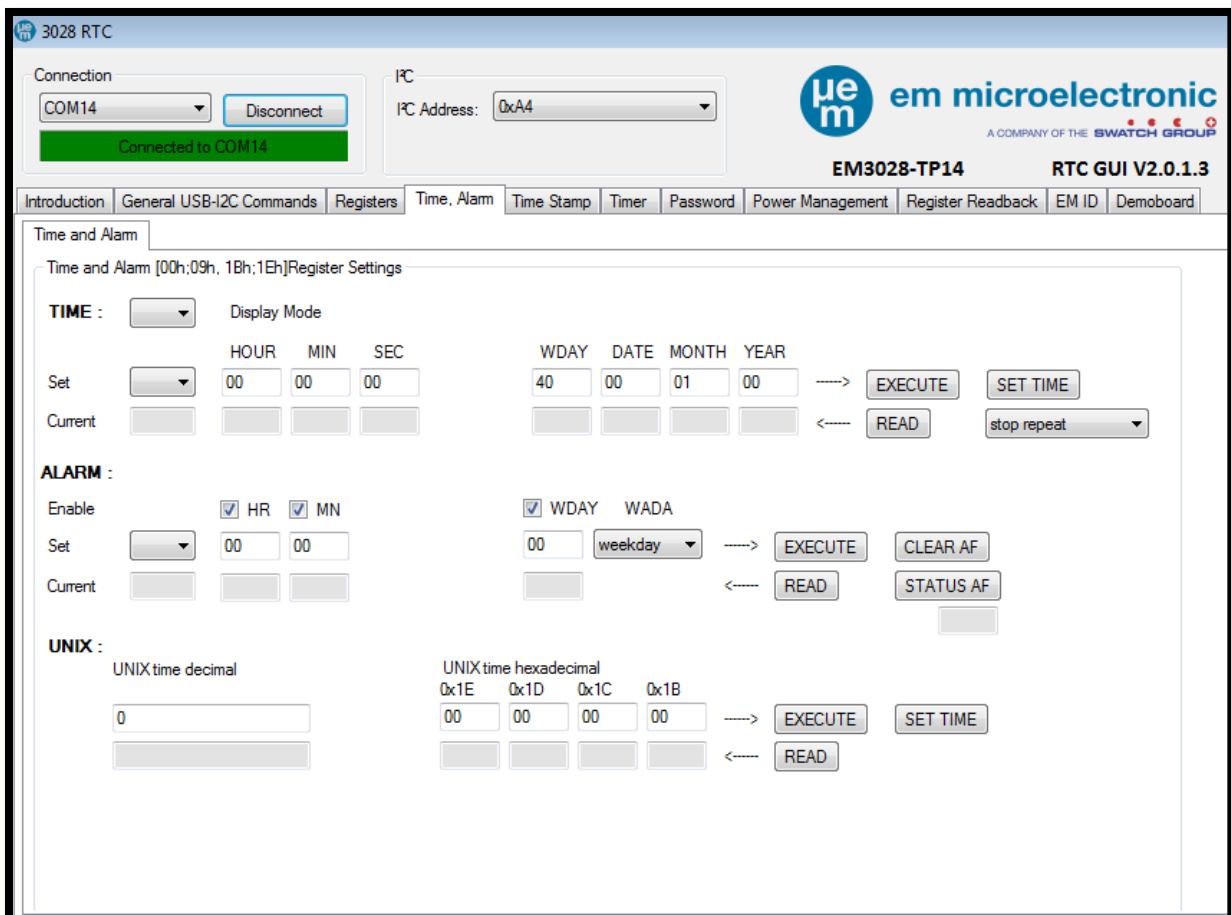

For evaluation purposes, EM Microelectronic provides an easy to use development board with GUI on PC, giving the user access to all registers of the IC. The development board is aimed to be used either directly connected to the target MCU or via the USB-I²C adapter (i.e. USB-I2C_kit from ELV).

The EM3028-TP14 is soldered on the Development Board, every pin of RTC is accessible at SMD-10 pol connector, and at the test-points are situated around the device.

There are two different types of development boards; one comes with the TSSOP14 RTC equipped and another contains the C7 SMD package with integrated quartz crystal.

In addition to the HW, we deliver an easy to learn GUI operating system that allows a quick evaluation of the EM3028.

Easy to use GUI - graphical user interface:

Further information and availability

| | |
|--------------------|---|
| Volume production: | started |
| Average lead-time: | approx. 8 weeks for volumes. Lower quantities ex stock Switzerland |
| Delivery: | On Tape & Reel; 2'500 units of TSSOP14 per reel |
| Samples: | Free of charge and available on request (ex stock) |
| Data-material: | Detailed data-sheet under www.emmicroelectronic.com/product/real-time-clocks-ic/em3028 |
| Contact at EM: | info@emmicroelectronic.com Phone: +41-32-755 5111 |

EM Microelectronic-Marin SA ("EM") makes no warranties for the use of EM products, other than those expressly contained in EM's applicable General Terms of Sale, located at <http://www.emmicroelectronic.com>. EM assumes no responsibility for any errors which may have crept into this document, reserves the right to change devices or specifications detailed herein at any time without notice, and does not make any commitment to update the information contained herein.

No licenses to patents or other intellectual property rights of EM are granted in connection with the sale of EM products, neither expressly nor implicitly.

In respect of the intended use of EM products by customer, customer is solely responsible for observing existing patents and other intellectual property rights of third parties and for obtaining, as the case may be, the necessary licenses.

Important note: The use of EM products as components in medical devices and/or medical applications, including but not limited to, safety and life supporting systems, where malfunction of such EM products might result in damage to and/or injury or death of persons is expressly prohibited, as EM products are neither destined nor qualified for use as components in such medical devices and/or medical applications. The prohibited use of EM products in such medical devices and/or medical applications is exclusively at the risk of the customer
